**Asian Citrus Psyllids**

Adults are about 1/6 inch long with tan-and-brown bodies and light-brown heads. When feeding, they raise their posterior ends at a 45 degree angle. Nymphs are orangish brown and excrete white, waxy tubules. Eggs are bright yellowish orange. • Nymphs and adults feed on new shoots of citrus, releasing toxin that causes dieback and leaf contortion. • Vector of Huanglongbing (HLB), or citrus greening disease, which results in yellowing foliage, and small, asymmetrical, partially green, inedible fruit. Trees eventually die.  
Related: Psyllids, Aphids, Whiteflies
