Questions & Answers

Q: What is Natria?

Q: What are synthetic and non-synthetic solutions?

Q: What naturally-derived active ingredients do Bayer Advanced Natria products use?

Q: Which Bayer Advanced Natria products can be used for organic gardening?

Q: Where can I use Bayer Advanced Natria products?

Q: How do I use Bayer Advanced Natria products?

current image of woman gardening

Q: What is Natria?

A: Developed by Bayer Advanced, the Natria product line offers a full range of non-synthetic choices for homeowners and gardeners alike that effectively protect the home, lawn and garden against listed pests, weeds and diseases.

[Back to top ▲](#)

Q: What are synthetic and non-synthetic solutions?

A: Synthetic solutions are formed through a chemical process created by humans. Non-synthetic solutions are those that naturally occur in nature. Bayer Advanced's Natria products offer non-synthetic alternatives to synthetic solutions, utilizing naturally-derived active ingredients.

[Back to top ▲](#)

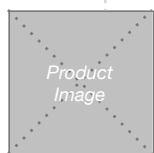

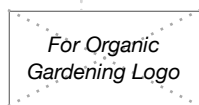

Q: What naturally-derived active ingredients do Bayer Advanced Natria products use?

A: Bayer Advanced's Natria products offer non-synthetic alternatives to synthetic solutions, utilizing naturally-derived active ingredients. These include solutions derived from plant oils, iron and other ingredients that occur in nature.

[Back to top ▲](#)

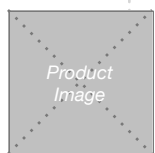

Q: Which Bayer Advanced Natria products can be used for organic gardening?

A: Four Natria products carry the For Organic Gardening logo, which means they are part of the USDA's National Organic Program and can be used to support organic gardening. Products with the For Organic Gardening logo are:

Natria Multi-Insect Control

[Product Details](#)

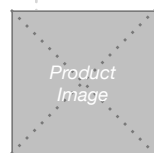

Natria Insecticidal Soap

[Product Details](#)

Natria Disease Control

[Product Details](#)

Natria Snail & Slug Killer Bait

[Product Details](#)

Compost Do's & Don'ts

As you tackle composting, you'll encounter simple questions. Do I need to turn the pile? Can I add newspapers? What about weeds? Why is my kitchen waste all over the yard? Use our checklist to unravel your compost queries.

The Do's of Composting

Location. Place your compost pile where it's convenient to fill and unload. Most gardeners stick the compost out of sight, which works if you have a riding tractor with a cart (or a good wheelbarrow and a strong back) to move materials to and from the pile.

Moisture. Composting stops in a too-dry pile. An active compost pile should feel like a damp sponge. Don't place your pile beyond the reach of the garden hose. During drought, you'll need to water it.

Starter. Get finished compost faster by adding "hot" compost starter or a half shovelful of finished compost between layers. Both materials contain microorganisms. You can also add a half shovelful of nutrient-rich meal (blood meal, alfalfa meal, etc.) or composted or well-rotted manure between layers.

Turning. You don't have to turn the compost pile - ever - but turning does speed up the decomposition process. By turning the pile, you introduce air and move outer, less decomposed layers into the center, where the action is. Many gardeners turn the pile once a growing season.

continue article

The Don'ts of Composting

Don't add weeds that contain seeds or root easily from cuttings, such as creeping Charlie or purslane. If you're unsure, don't compost it.

Don't add whole autumn leaves. They can mat together, limit water penetration, and won't decompose.

Don't add dairy products, meat, bones or animal waste.

Don't add diseased or insect-infested plants. This is vital when composting vegetable plants. If Mexican bean beetles infested your beans, don't compost the plants to avoid harboring adults or eggs. The same is true with powdery mildew-infested squash vines. Adding these infests the pile.

Don't add mounds of grass clippings without mixing them with something brown (like shredded dry leaves or newspapers), or they'll eventually stink.
